Summary

AI developer specialized in deep learning and computer vision. My work has focused primarily in generative modeling and recommender systems. A mixed background in mathematics, psychology, and computer science allows me to approach problems with technical rigor without foregoing explainability. I leverage years of experience as an academic researcher as well as a Machine Learning engineer and Statistical Research Analyst for industry.

Technical Skills

Languages	Technologies	Concepts
Python	PyTorch & Tensorflow	Deep Learning
SQL	Numpy & Pandas	Computer Vision
Java	OpenCV & Sci-Kit learn	Recommender Systems
R	Docker	Artificial Intelligence
JavaScript	Next Js	Machine Learning

Industry Experience

MediTrak Life, Inc.   Dec 2023 – Present
Machine Learning Engineer   *West Lafayette, IN (remote)*

- Conceptualized and implemented a system to help regulate blood pressure through behavioral recommendations derived from XGBoost regressors.
- Used 3 different augmentation schemes on extremely sparse patient data, and user transfer learning to personalize the recommender algorithm to each user.

El Paso Community College   Jan 2019 – Present
Statistical Research Analyst   *El Paso, TX*

- Maintained and queried a database of student academic data using MySQL.
- Established a data pipeline to automatize reporting processes with Pandas.
- Assisted in the implementation of a district wide change of counseling strategy by providing data driven insights.

Research Experience

Graduate Research Assistant | *PyTorch, TensorFlow, OpenCV, SciKit Learn, Docker, Numpy*

- Designed and implemented a 2D animation inbetweener using Generative Adversarial Networks and autoencoders (Generative Deep Learning - AI).
- Extracted dataset of over 800k triplets (sequence of 3 consecutive frames) directly from scrapped videos using Shot-Detection algorithms.
- Implemented an image retrieval system using pre-trained VGG-19 embeddings.

Undergraduate Research Assistant | *LLMs, Java, Python, Pandas*

- Implemented a tv-show and movies recommender system integrating personality scores.
- Created databases and established pipelines for 26 million ratings from over 470,000 users.
- Implemented a language-based recommender system using a classical vector space model and pre-trained LLM embeddings.

Education

MS in Artificial Intelligence   University of Texas at El Paso - 2022
BS in Mathematics & Psychology   University of Texas at El Paso - 2019
